

AMYLOIDOSIS PROJECT ECHO

The Amyloidosis Project ECHO has been created to address disparities and challenges in amyloidosis care delivery.

Project ECHO (Extension for Community Healthcare Outcomes), developed at the University of New Mexico, is a collaborative learning model for medical education that enables expert healthcare teams to provide best-practice education to non-specialist healthcare providers through case-based learning and videoconferencing technology.

What Is the ARC Amyloidosis Project ECHO?

This virtual interactive clinic offers quarterly 1-hour sessions focused on AL (light chain) and TTR (transthyretin) amyloidosis, two underrecognized but increasingly manageable causes of heart failure and multisystem disease. Each session includes:

- Brief didactic lectures (20 minutes)
- Case-based learning by healthcare providers from real-world scenarios (20 min)
- Interactive Q&A (20 min) with amyloidosis specialists

Join us on November 12th, 2025

Initial Steps in Early Recognition and Diagnosis of Amyloidosis:

Review of 'Red Flags' to Improve Early and More Accurate Recognition of AL and ATTR Amyloidosis

6:00 PM – 7:00 PM EST

Connect via Zoom

Who should attend?

All clinicians who may encounter patients with unexplained heart failure, neuropathy, or multisystem symptoms, including: Primary care providers, Cardiologists, Neurologists, Nephrologists, Hospitalists, Nurse practitioners, Physician Assistants, and Pharmacists

Participants will be able to:

- Increase awareness of the clinical signs and “red flags” associated with AL and ATTR amyloidosis.
- Promote timely referrals to specialists and multidisciplinary teams for suspected amyloidosis cases.
- Reduce delays in diagnosis by equipping providers with tools and resources for earlier suspicion and recognition.
